
OBSERVED. 979 USCRN wetting events, 107 stations, storms 17 Jun–31 Oct 2026. Look = ≥ 1 actual Sentinel-1C/1D or NISAR acquisition inside the half-amplitude window (not a retrieval or detection). 212 of 474 events without a look rose ≥ 0.09 m³/m³. 95 % CIs: station-cluster bootstrap (2,000 draws, seed 20261103); standardisation uses the cohort's duration mix.
